Customer FAQ

Answers to the most common questions about Food Truck Profit & Pricing System PRO.

Do I need Excel?

No. You can use Microsoft Excel (2010 or later, Windows or Mac) or Google Sheets with a free Google account.

Does it use macros?

No. There are no macros, VBA, add-ins or external connections, so it opens without security prompts beyond Excel's normal 'Enable Editing' for downloaded files.

Which file should I use?

Use the TEMPLATE for your business. The SAMPLE file is a fictional demo for learning - its numbers are invented and are not industry benchmarks.

Can I use it in the UK?

Yes. Choose GBP in Settings. Symbols change to £; amounts are not converted. UK fluid ounces, pints and gallons are included as units.

Why is my ingredient purchase not reducing my profit?

Because the food you used is already counted in cost of goods sold (recipe cost × items sold). Counting purchases as well would count the same food twice. Purchases stay in Expenses for your records.

Why is labour on Menu Pricing not in gross profit?

Prep labour on Menu Pricing helps you set a price that covers your time. Your real wages are entered on Expenses and reduce net profit once.

What is the difference between margin and markup?

Margin = profit ÷ price. Markup = profit ÷ cost. An item costing 4.00 sold for 10.00 has a 60% margin and a 150% markup. The workbook shows both.

My recipe line says 'Unit mismatch'.

The recipe unit and the ingredient's stock unit measure different things (e.g. 'each' and 'g'). Choose a unit of the same type, or change how you stock the ingredient.

Can I convert grams to cups?

Not automatically - that needs the density of each ingredient. Enter the recipe in the same type of unit as the stock unit (weight with weight, volume with volume).

Do I have to use the Recipe Builder?

No. Type an ingredient cost per serving in 'Ingredient override' on Menu Pricing. Recipes add automatic cost updates and inventory tracking.

Is the inventory exact?

It is an estimate: recipe quantities × items sold, plus waste. Do regular stock counts to correct it (see the Quick-Start Guide).

Do event forecasts affect my profit figures?

No. Forecasts stay on the Event Predictor. Only your Sales Log and Expenses drive the Dashboard.

Can I add more expense categories or units?

Yes - type them into the empty cream rows on the Lists sheet and choose a cost type.

What if I run out of rows?

3,000 sales rows cover about a year for a typical menu at one row per item per day. Start a new copy each year, or insert rows inside the table and copy a formula row into them.

Does it calculate tax or VAT?

No. Enter sales without sales tax/VAT for accurate margins. It is a management tool, not tax advice.

Can I share it with my business partner?

Yes, within your own business. The licence covers one business; please don't share it publicly or resell it.

Will I get updates?

If an update is released, it is delivered through the platform you bought from (Etsy or Gumroad downloads).

Something looks wrong.

Check the Dashboard's Alerts panel first - rows with problems are not counted. If it is still wrong, contact us through the platform's messaging with a description (please don't send your business data unless needed).
